IDENTIFIERS *New York

ABSTRACT

This document is one of a series of reports of the Academic Program Information Systems. The purpose of this report is to provide information regarding enrollment in academic programs at each of the state university campuses from fall 1969 through fall 1972. The format in which the data is presented has been designed to reveal enrollment trends by programs within a single campus, as well as by programs across the state university campuses. This report is divided into two sections; both sections are arranged by level of award. Part 1 shows the enrollment by campus in the programs they offer. Part 2 shows the enrollment in systemwide programs as well as by the campuses where they are offered. This method of organizing the data makes it comparatively easy to trace enrollment trends in programs by campus from fall 1969 through fall 1972 as well as systemwide and across campus for the same period. The information contained in this report should be especially useful to those individuals involved in planning, whether it be departmental, divisional, campus, or systemwide planning. (Author/PG)

-----------------------------	---

INTRODUCTION

One of the objectives of the State University of New York is the development of programs designed to serve the needs and interests of its entire constituency. The growing diversity of interests and needs which the University is committed to serving is reflected in the development of curricular offerings of expanded scope and variety. This richness of program options is consonant with the assumptions stated in the 1972 Master Plan which indicates that "The University's academic programs will become increasingly varied, offering more options at the undergraduate and graduate levels which reflect new fields of knowledge, new social expectations, and the needs of new kinds of students".

This document is one of a series of reports of the Academic Program Information System. The purpose of this report is to provide information regarding enrollment in academic programs at each of the State University campuses from Fall 1969 through Fall 1972. The format in which the data is presented has been designed to reveal enrollment trends by programs within a single campus, as well as by programs across the State University campuses. The report is divided into two sections; both sections are arranged by level of award. Part I shows the enrollment by campus in the programs which they offer. Part II shows the enrollment in programs system-wide as well as by the campuses at which they are offered. This method of organizing the data makes it comparatively easy to trace enrollment trends in programs by campus from Fall 1969 through Fall 1972 as well as system-wide and across campus for the same time period. The information contained in this report should be especially useful to those individuals involved in planning, especially academic and curricular planning, whether it be departmental, divisional, campus or system-wide planning.

This report is prepared on the basis of the academic program inventory. Any programs which are not known to be fully approved are so footnoted. Programs which have been dropped or are inactive will show enrollment in the earlier years only. Very new programs or long inactive programs will show no enrollment. Recently initiated programs will show enrollment only in the later years. Programs whose names have changed will show enrollment under the appropriate name for the given year.

In general, the enrollments which are shown in this report are those which are reported to us by the individual campuses. In some cases, the taxonomy of programs used in this report has resulted in a loss of specificity with respect to options available in a curriculum if those options are not reflected in the taxonomy. In this case enrollment is shown aggregated with the appropriate curriculum.

Given an inventory of programs and an enrollment report of this magnitude, there are inevitable omissions and errors which we will continue to correct in subsequent editions as they are brought to our attention.

We welcome all suggestions and comments for the improvement of the accuracy and scope of coverage in this report. We appreciate the effort and cooperation that was involved on the part of the campuses in providing the data necessary for the report. We would also like to thank our professional, statistical and typing staff whose efforts made this report possible.

Tommy Annas
Acting Director
